

Experimental Research – Lower, Middle, Upper Primary Section

Section Co-ordinators: Pina Pikos and Jason Smith

Another brilliant year of entries for the Experimental research section. Congratulations to all the students who put in time and effort into their projects. Also a big thank you to all the teachers and parents, who gave their time to participate in this section of Science Talent Search.

Experimental research is an unlimited way for students to encourage and grow in their skills in scientific practice. This allowed them to work through a hypothesis, develop an aim, create methodology, collect data, make observations, record and discuss results and finally draw conclusions.

This year, many exceptional projects passed through our hands. There were so many topics that covered varying subjects. The Bursary winners had a clear experimental design and an in-depth analysis and clear discussion of the results that they concluded. These winners followed the guidelines that the project needed to follow.

A huge and special thank you goes out to the judges for their time and contribution to make this section, Experimental Research an absolute success.
